Discussion Questions

1. If a landowner already has a nutrient management plan, should cost-sharing be provided to update it to meet the Silurian bedrock performance standard?
 - a. Yes
 - i. If cost-sharing is provided, how should it be calculated? (For example, per acre for entire plan or by new field, current per acre rate or something different, flat rate, prorated amount, etc)
 - b. No
 - i. What are some reasons not to provide additional cost-sharing for an update of the nutrient management plan?
 - c. Not sure
2. What practices or actions should be cost-shareable to implement the plan to meet the Silurian bedrock performance standard? (for example, low-disturbance manure injection, cropland rental, costs associated with conversion to no-till).
3. Should an offer of cost-sharing for compliance capture the opportunity cost of a less profitable use of the land?
 - a. Yes
 - i. If yes, what costs should be included in that offer?
 - b. No
 - i. If not, why not?
